## DETAILED ACTION

### *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-17 are provisionally rejected under the judicially created doctrine of double patenting over claims 1-17 of copending Application No. 10/651,609. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: Claims of the instant application are structurally identical to the copending application.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other

Art Unit: 3672

copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

### ***Claim Objections***

Claim 11 objected to because of the following informalities: The recitation "is" in line 2 should be changed to "are". Appropriate correction is required.

### ***Allowable Subject Matter***

Claims 1-17 would be allowable if the double patenting rejection set forth in this Office action is overcome.

The prior art of record does not disclose or suggest all the claimed subject matter including a bearing assembly positioned downhole of the PC Pump and spaced from the stator, a shaft connected to the rotor and bearings for rotatably supporting and axially restraining the rotor to the bearing assembly so that as the PC Pump rotor rotated to pump liquid through the stator from above the packer to the formation below the packer, uphole loads acting on the rotor are restrained through the bearing assembly.

The prior art of record does not disclose or suggest all the claimed subject matter including rotating the rotor for pumping liquids from uphole of the packer downhole through the PC Pump and into the lower formation, and supporting the rotor with a bearing assembly positioned downhole of the PC Pump and spaced from the stator.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Michael et al., U.S. 6,886,636 and Kennedy et al., U.S. 5,730,871 disclose a similar method.

Hill, U.S. 2,739,650 discloses a similar uphole bearing assembly.

Tetzlaff et al., U.S. 5,988,992; Barrus et al., U.S. 5,501,580 and Eppink, U.S. 4,676,725 disclose a similar downhole apparatus.
